

FILL IN THE BLANKS!

Osawa lives in Tanzania, he is eight years old and was born with a cleft lip. A baby born with a cleft lip has gap between his/her nose and mouth. A baby born with a cleft palate has a hole in the back of his/her throat. This meant that Osawa was not able to speak properly and his mother and father had trouble feeding him. Osawa was very shy in school and he did not talk in class. He wanted to play sports with his friends, but he thought that the other children would make fun of him.

Osawa's parents heard about Smile Train, an international charity that provides care for children who were born with cleft lip and/or palate. Osawa and his mother travelled from their small town all the way to the capital Dar es Salaam so that he could have surgery to repair his smile. He had to leave behind his other brothers and sisters, his grandparents and his father.

When Osawa woke up after his cleft surgery, he could not stop looking in the mirror! He had a brand new smile!

Today, Osawa cannot stop smiling. He is the top of his class, his English is improving every day and he spends his afternoons playing sports with his best friends. Smile Train's partner surgeons were able to help Osawa smile again.

FILL IN THE BLANKS!

Osawa lives in _____, he is eight years old and was born with a cleft lip. A baby born with a cleft lip has a gap between his/her nose and mouth.
